The following specification particularly describes the invention and the manner in which it is to be performed

MANUAL ROTI/CHAPATI MAKER WITH ROLLING PIN HOLDER AND INTEGRATED CONTAINER SPACE

FIELD OF INVENTION

The present invention relates to kitchen appliances, specifically to a manual apparatus for making rotis or chapattis. It includes an integrated rolling pin holder and designated spaces for containers used to store oil, salt or other ingredients.

BACKGROUND OF THE INVENTION

Roti or chapati, a type of unleavened flatbread, is a staple in many households, especially in South Asian cuisine. Preparing roti typically involves rolling out small portions of dough into thin, round shapes using a rolling pin. This process requires a clean, stable surface and easy access to ingredients. Traditional methods often result in a cluttered workspace, making it cumbersome and time-consuming.

Existing roti-making devices are generally limited to electric or semi-automatic designs that may not be suitable for every household. Moreover, these designs lack provisions for organizing rolling pins and other essential ingredients in one place. Therefore, there is a need for a compact, manually operated apparatus that simplifies the roti-making process and keeps the workspace organized.

US20050260318 - Process for improver premix for chapatis and related products. A process for preparing an improved quality chapatis having novel improver premix providing longer shelf-life to the chapatis, said process comprising steps of mixing an improver mix of concentration ranging between comprising of ascorbic acid, sodium stearoyl lactylate and guar gum with whole wheat flour, adding sufficient quantity of water to the mixture of step (a) and mixing the same to obtain chapati dough, ageing the chapati dough for a time period in the range of 20 to 30 minutes, and sheeting and baking the aged chapati dough to obtain the chapatis; also, an improver premix comprising ascorbic acid, sodium stearoyl lactylate, and guar gum useful for the preparation of chapati, and further, a chapati comprising of whole-wheat flour, improver premix, water, total dry matter, moisture in chapati.

IN202141020647 - Portable Roti Maker. Exemplary embodiments of the present disclosure are directed towards a portable roti maker. The portable roti maker comprising: components 100A-100C; a first processing device operably coupled to a second operating device, whereby the first processing device is operably coupled to a LCD screen and a keypad and whereby the second processing device is operably coupled to a heating pan, servo motors, motor driver, geared motors and a battery and circuit module. This Automated roti maker is designed mainly for Middle Class Indian Mothers. This machine will serve as a cooking partner for women and help them to save a lot of productive time and energy. It is simple and easy to use. The machine costs around Rs. 30,000. It is affordable and cheaper when compared to existing products in market which have a cost of over 80,000

SUMMARY OF THE INVENTION

The present invention addresses the aforementioned challenges by providing a manual roti/chapati maker that integrates a rolling pin holder and designated spaces for ingredient containers. The device is designed to offer a stable rolling surface with built-in slots or compartments that can hold oil, salt and other necessary items, making the entire process more convenient and efficient. The invention comprises of a flat, non-stick surface for rolling dough, a rolling pin holder attached to one side of the rolling surface and multiple container spaces positioned above to the rolling pin surface for storing necessary ingredients.

DETAILED DESCRIPTION OF THE INVENTION

The detailed structure of the manual roti/chapati maker (100) is depicted in the accompanying drawings: The top view of the device (Figure 1) showing the rolling surface (102), rolling pin holder (101), and container spaces (103). The side view (Figure 2), highlighting the elevation of the rolling surface. The rolling surface (102) is made of wood, providing a smooth base for rolling out the dough. The surface is slightly elevated to prevent dough from sticking to the countertop. The surface is circular in shape, with dimensions suitable for rolling a standard-sized roti or chapati. A dedicated rolling pin holder (101) slot is carved to one side of the rolling surface, designed to secure the rolling pin when not in use. The holder (101) is crafted to accommodate rolling pins of various sizes and materials, ensuring versatility. Two compartments (103) are integrated above the rolling pin holder, which can be used to hold oil, salt or other ingredients. Each compartment (103) is detachable to clean the container separately.

BRIEF DESCRIPTION OF THE DRAWING

The manual roti/chapati maker (100) is constructed using food-grade materials, ensuring safety and durability. The invention is to make change in the existing product by providing slots and spaces to secure rolling pin (101) and extra containers (103) are added to make the process of the food preparation easy by keeping necessary ingredients or items near and handy. The rolling surface (101) is elevated from the floor to keep the food safe. The manual roti/chapati maker described in this invention provides several advantages such as; it offers a compact and organized solution for making rotis or chapati manually; the integrated rolling pin holder (101) and container spaces (103) save time and reduce clutter in the workspace, while the detachable design makes cleaning simple.

WE CLAIM

1. A manual roti/chapati maker (100) comprising:
 - a. A rolling surface (102);
 - b. An integrated rolling pin holder (101) attached to the side of the rolling surface;
 - c. Two container (103) spaces for holding ingredients, positioned above the rolling pin holder (101).
2. The manual roti/chapati maker (100) as claimed in Claim 1, wherein the rolling surface is made of food-grade wood.
3. The manual roti/chapati maker (100) as claimed in Claim 1, wherein the rolling pin holder (101) is designed to accommodate rolling pins of various sizes and shapes.
4. The manual roti/chapati maker (100) as claimed in Claim 1, wherein the container spaces (103) are detachable to keep the container clean and fresh.

ABSTRACT

The present invention/innovation relates to a manual roti/chapati maker (100) designed and fabricated for the preparation of roti/chapati in hygiene manner. This manual roti/chapati maker (100) makes the process of making roti/chapati easy with an integrated rolling pin holder (101) and container space (103) is a novel and efficient tool. It is designed to accommodate rolling pins of various sizes and shapes with detachable containers to store ingredients necessary for food preparation. It offers practical benefits for household use by combining essential functions in one compact device, thereby enhancing the user experience.
